

New design of pilothouse on the Nauticat 42

- The shape and looks of the pilothouse is renewed, giving the Nauticat 42 a new appearance. The different pilothouse is slim lined and modern. The outlines of the windows are new. All these features together bring new energy to the trustworthy Nauticat 42!

- The pilothouse roof now features an eyebrow exactly like the Nauticats 515 and 525. The eyebrow brings a sleek and elegant look to the boat.

- The outside steering position is redesigned. The placement of the equipment is much better. There is now more space for instruments and the gear handle is moved to an improved position, up and on the right of the console. The instruments have an integrated console for the installations. The helmsman's seat is redesigned to be more ergonomic. And there is also more space in general in this section of the cockpit.

- Inside the pilothouse something new was also done. This is the first pilothouse on a Nauticat 42 where the floor of the settee group is not raised. The pilothouse "opens" up and there is a feel of huge volume inside. Another great advantage is that you sit a little bit more hidden. So for those customers who would like to have the dinette in order to make it possible to hide from by passers on the quay, but do not like to use the space down below beside the pantry for a dinette, this is the perfect solution! The only disadvantage for some customers might be that you don't see out when you sit down in the settee area. Anyhow a very interesting interior option. We will see more of these!
